Summary

I specialize in building complete web applications, from clean and responsive frontends with React and Next.js to powerful backends using Fastify, Express.js, and databases such as SQLite. I have successfully completed the Common Core at 1337 Coding School, where I developed strong problem-solving and software engineering skills. I enjoy solving real-world problems with scalable and elegant code.

Skills

Languages: HTML, CSS, Tailwind CSS, C, C++, Python, Node.js, Automation, Adaptability to Change Oct2023–Present
Technologies & Tools: Docker, ReactJS, Next.js, TailwindCSS, Fastify, Express, NestJs, FastAPI, Websockets, Postman, N8n, Git, Figma, PostgreSQL, Supabase, MongoDB, SQLite, OAuth2.0, REST APIs

Education

UM6P 1337 Coding School (42Network)

Completed 20+ hands-on software engineering projects covering full-stack web development, mobile application development, systems programming, networking, Docker-based infrastructure, machine learning, and mathematical algorithm implementation. All projects were built within 1337's peer-to-peer learning environment and validated through rigorous technical code reviews.

Relevant Coursework: Fullstack Web Development, Containerization, Object Oriented Programming, Databases, Data Structures and Algorithms, Operating Systems, Network Programming, Network Administration

Project Work

- **Real-Time Multiplayer Gaming Platform:** Developed a full-stack multiplayer ping-pong platform using Next.js for the frontend, Fastify for the backend, and SQLite3 for data storage. Designed a clean and responsive interface with Tailwind CSS. Implemented real-time gameplay synchronization, player matchmaking, tournaments, live chat, user profiles, authentication, and game statistics.
- **HTTP/1.1 Web Server:** Implemented an HTTP server from scratch in C++98 with support for the HTTP/1.1 protocol. Built non-blocking request handling using poll() and added support for GET, POST, and DELETE methods. Implemented configuration-file parsing, CGI execution with Python and PHP, sessions, cookies, custom error pages, file uploads, and request validation.
- **Torrent Video Streaming Platform:** Developed a full-stack video search and streaming platform that downloads and streams legally distributable video content through the BitTorrent protocol. Implemented authentication, user profiles, multilingual preferences, advanced search, filtering, pagination, movie details, comments, subtitles, and watched-video tracking. Built background, non-blocking video processing with progressive streaming and automatic format conversion for browser compatibility. Exposed project data through a secured RESTful API with OAuth2 authentication.
- **Containerized Web Infrastructure:** Designed and deployed a production-style multi-container infrastructure using Docker and Docker Compose. Built custom Docker images for NGINX, WordPress (PHP-FPM), and MariaDB with isolated networking, persistent storage, and automated orchestration. Configured secure TLSv1.2/1.3 HTTPS, environment-based configuration, and extended the platform with Redis, Adminer, FTP, and additional services to improve performance, maintainability, and deployment consistency.

About Me

- Fluent in **Arabic, French, and English**, with the ability to communicate effectively in multicultural and international environments.
- Strong **communication skills**, capable of gathering requirements, aligning expectations, and delivering high-quality solutions within tight deadlines.
- **Collaborative team** player who thrives in peer-driven development environments, strengthened through experience at 1337 Coding School.
- **Fast learner** with strong **adaptability to new technologies**, frameworks, and development environments, always eager to expand my technical expertise.
- Passionate about **problem-solving**, designing scalable solutions, and tackling complex technical challenges with analytical thinking, curiosity, and a continuous improvement mindset.
